# Test Case 1: Fetching Data from API to Sanity in Next.js

Test Case ID: TC001

# Test Case Description:

Verify that data is fetched correctly from the API and stored in the Sanity database.

# Test Steps:

Set up the API client in Next is.

Configure Sanity schemas and establish connection.

Fetch product data using the API endpoint.

Store data in the Sanity database.

Verify successful insertion of data in Sanity Studio.

# Expected Result:

Product data is successfully retrieved from the API and appears in Sanity Studio with no errors.

#### Actual Result:

Product data fetched successfully and displayed correctly in Sanity Studio.

# Status:

Passed

## Severity Level:

Medium

#### Assigned To:

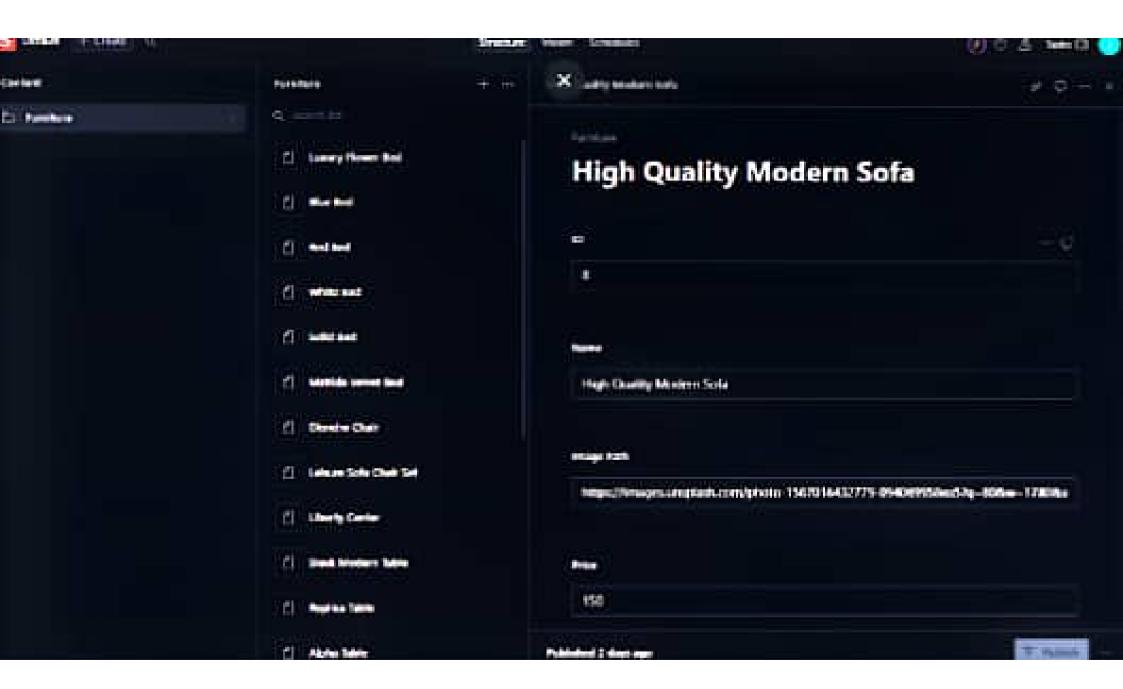

My Self

#### Remarks:

API fetched data correctly, but logging can be improved to handle potential rate limits.

Test Case 1: Fetching Data from API to Sanity in Next.js

Test Case ID: TC002

# **Test Case Description:**

Verify that products fetched from Sanity are displayed correctly on the website.

# Test Steps:

Felch product data from Sanity in Next is.

Create components to display products (image, name, price).

Map over the product list and render dynamically.

Check for edge cases like missing data or images.

Test on different browsers and screen resolutions

# Expected Result:

All products are displayed with correct information, layout, and styles.

## Actual Result:

Products are displayed correctly on the site, but placeholders appear for missing images.

# Status:

Passed

# Severity Level:

Low

# Assigned To:

My Setf

#### Remarks:

Add default placeholder images for products missing images in Sanity.

Test Case 1: Fetching Data from API to Sanity in Next.js

Test Case ID: TC003

# Test Case Description:

Ensure the site is fully responsive and includes functional add-to-cart integration.

# Test Steps:

Adjust CSS for responsiveness (media queries, flexbox, grid).

Test layouts on various screen sizes (mobile, tablet, desktop).

Implement an "Add to Cart" button for each product.

Check if the selected product is added to the cart and displayed correctly.

Leave some images missing to verify fallback behavior.

# **Expected Result:**

The site layout adjusts seamlessly on all devices, and the add-to-cart feature works flawlessly.

# Actual Result:

Responsive design works as expected; add-to-cart integrates properly, but missing images show placeholders.

## Status:

Passed

# Severity Level:

**High** 

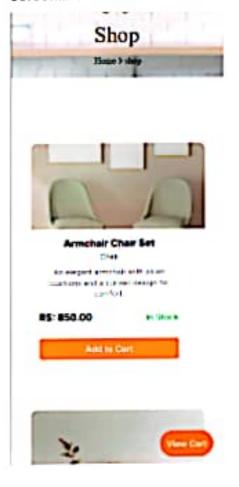

## Assigned To:

My Self

#### **Remarks**

Consider lazy-loading images to improve performance and user experience.
